

Exploratory data analysis & Model BUILDING

1. Data collection

1. Structured data

2. Unstructured data

3. Data Sources

4. Data quality

2. Data Preprocessing

• Missing values

• Duplicate removal

• Outlier detection

• Data cleaning

• Data transform

• Feature Scaling

3. Exploratory Data Analysis

• Descriptive Stats

• Data Visualization

• Correlation analysis

• Pattern discovery

• Trend analysis

• Anomaly detection

4. Feature Engineering

Feature Selection

Feature extraction

Dimensionality reduction

Feature creation

5. Model Building

Train-test Split

Cross validation

Algorithm selection

Model training

Deployment & Monitoring

→ Model deployment

→ Performance monitoring

→ Model updating

→ Feedback Loop

MODEL EVALUATION

Accuracy

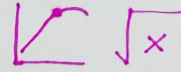

Precision

Recall

F1-Score

ROC-AUC

RMSE

OBJECTIVE

Build accurate, reliable models that generate insights & drive better decisions.

Key benefits :

Understand data better

Uncover Patterns & trends

Build accurate MODELS

Make data driven decisions.
